2 × 1 W PORTABLE/MAINS-FED STEREO POWER AMPLIFIER

GENERAL DESCRIPTION

The TDA7053 is an integrated class-B stereo power amplifier in a 16-lead dual-in-line (DIL) plastic package. The device, consisting of two BTL amplifiers, is primarily developed for portable audio applications but may also be used in mains-fed applications.

Features

- No external components
- No switch-ON/OFF clicks
- Good overall stability
- Low power consumption
- Short-circuit-proof

FUNCTIONAL DESCRIPTION

The TDA7053 is a stereo output amplifier, with an internal gain of 39 dB, which is primarily for use in portable audio applications but may also be used in mains-fed applications. The current trends in portable audio application design is to reduce the number of batteries which results in a reduction of output power when using conventional output stages. The TDA7053 overcomes this problem by using the Bridge-Tied-Load (BTL) principle and is capable of delivering 1.2 W into an 8 Ω load (V_P = 6 V). The load can be short-circuited under all input conditions.

RATINGS

Limiting values in accordance with the Absolute Maximum System (IEC 134)

parameter	conditions	symbol	min.	max.	unit
Supply voltage		V_P	–	18	V
Non-repetitive peak output current		I_{OSM}	–	1.5	A
Total power dissipation		P_{tot}	see Fig. 2		
Crystal temperature		T_c	–	+ 150	°C
Storage temperature range		T_{stg}	–55	+ 150	°C

THERMAL RESISTANCE

From junction to ambient	$R_{th\ j\text{-}a}$	50	K/W

Power dissipation

Assuming: $V_P = 6$ V and $R_L = 8\ \Omega$:

The maximum sinewave dissipation is 1.8 W, therefore $T_{amb(max.)} = 150 - (50 \times 1.8) = 60$ °C.

Frequency response		f	–	0.02 to 20	–	kHz

Notes to the characteristics

1. With a practical load the total quiescent current depends on the offset voltage.
2. Ripple rejection measured at the output with R_S = 0 Ω and f = 100 Hz to 10 kHz. The ripple voltage (200 mV) is applied to the positive supply rail.
3. R_S = 5 kΩ.
4. The noise output voltage (RMS value) is measured with R_S = 5 kΩ, unweighted and a bandwidth of 60 Hz to 15 kHz.
5. The noise output voltage (RMS value) is measured with R_S = 0 Ω and f = 500 kHz with 5 kHz bandwidth. If R_L = 8 Ω and L_L = 200 μH the noise output current is only 100 nA.
